APA Compliance with Ethical Principles Form

CERTIFICATION OF COMPLIANCE WITH APA ETHICAL PRINCIPLES

The APA Publications and Communications Board has added to Ike Instruction to Author for each APA journal the following Statement: "Authors will be required to state its writing that they have complied with slot Human or animal, or to describe the details of treatment.' APA ethical standards in the treatment of their sample, (A copy of the APA Ethical Principles may be obtained at http://vceew.opo.org/ethics/ or by writing the APA Ethics Office, 750 first Street NE, Washington, DC 20002-4242.)

For your information, the APA Ethical Principles concerning research and sign the form provided on the bock of thin eked and publication are reprinted below. Please review the Principles to indicate that you ore ire compliance.

8.01 Institutional Approval

When institutional approval is required, psychologists provide accurate information about their research proposals and obtain approval prior to conducting the research. They conduct the research in accordance with the approved research protocol.

8.02 Informed Consent to Research

(a) When obtaining informed consent as required in Standard 3.10. Informed Consent, psychologists inform about participants about (1) the purpose of the research, expected duration, and procedures; (2) their right to decline to participate and to withdraw from the research once participation has begun; (3) the foreseeable consequences of declining or withdrawing; (4) the foreseeable factors that may be expected to influence their willingness to participate such as potential risks, discomfort, or adverse effects; (5) any prospective research benefits; (6) limit of confidentiality; (7) incentives for participation; and (8) whom to contact for question about the research and research participants’ rights. They provide opportunity for the prospective participants to ask questions and receive answers. (See also Standards 8.03, Informed Consent for Research; and 8.07, Description in Research).
(b) Psychologists conducting intervention research involving the use of experimental treatment clarify to participants at the outset of the research (1) the experimental nature of the treatment; (2) the services that will or will not be available to the control group(s) if appropriate; (3) the mean by which assignment to treatment and control groups will be made; (4) available treatment alternatives if an individual doesn’t wish to participate in the research or wishes to withdraw once a study has begun; and (5) compensation for or monetary costs of participating including, if appropriate, whether reimbursement from the participant or a third party payor will be sought (See also Standard 8.02a, Informed Consent too Research.)

**8.03 Informed Consent for Recording Voices and Image in Research**

Psychologists obtain informed consent from research participants prior to recording their voices or images for data collection unless (1) the research consists solely of naturalists’ observation in public places, and it is not anticipated that the recording will be used in a manner that could cause personal identification or harm, or (2) the research design includes deception, and consent for the use of the recording is obtained during debriefing. (See also Standard 8.07, Deception in Research)

**8.04 Client/Patient, Student, and Subordinate**

(a) When psychologists conduct research with clients/patients, students, or subordinates as participants, psychologists take steps to protect the prospective participants from adverse consequences of declining or withdrawing from participation.

(b) When a research participant is a course requirement or an opportunity for extra credit, the perspective participant is given the choice of equitable alternative activities.

**8.05 Dispensing With Informed Consent for Research**

Psychologists may dispense with informed consent only (1) where research would not reasonably be assumed too create distress or harm and involves (a) the study of normal educational practices, curricula, or classroom management methods conducted in the educational setting; (b) only anonymous questionnaire, naturalistic observations, or archival research for which disclosure of response would not place participants at risk of criminal or civil liability or damage their financial standing, employability, or reputation, and confidentiality is protected; or (c) the
study of factors related to job or organization effectiveness conducted in organizational setting for which there is no risk to participants’ employability, and confidentiality is protected or (2) where otherwise permitted by law or federal or institutional regulations.

8.06 Offering Inducements for Research Participation

(a) Psychologists make reasonable efforts to avoid offering excessive or inappropriate financial or other inducements for research participation when such inducements are likely to coerce participation.

(b) When offering professional service as an inducement for research for research participation, psychologists clarify the nature of the services, as well as the risks, obligations, and limitations. (See also Standard 6.05, Barter with Clients/Patients.

8.07 Deception in Research

(a) Psychologists do not conduct a study involving deceptive technique is justified by the study’s significant prospective scientific, educational, or applied value and that effective non-deceptive alternative procedures are not feasible.

(b) Psychologists do not deceive prospective participants about research that is reasonably expected to call physical pain or severe emotional distress.

(c) Psychologists explain any deception that is integral feature of the design and conduct of an experiment to participants as early as is feasible, preferably at the conclusion of their participation, but no later than at the conclusion of their participation, but no later than at the conclusion of data collection, and permit participants to withdraw their data. (See also Standard 8.08, Debriefing.)

8.08 Debriefing

(a) Psychologists provide a prompt opportunity for participants to obtain appropriate information about the nature, results, and conclusions of the research, and they take reasonable steps to correct any misconception that participants may have of which the psychologists are aware.
(b) If scientific or humane values justify delaying or withholding this information, psychologists take reasonable measures to reduce the risk of harm.

(c) When psychologists become aware that research procedures have harmed a participant, they take reasonable steps to minimize the harm.

**8.09 Humane Care and Use of Animals in Research**

(a) Psychologists acquire, care for, use, and dispose of animals in compliance with current federal, state, and local laws and regulations, and with professional standards.

(b) Psychologists trained in research methods and experienced in the care of laboratory animals supervise all procedures involving animals and are responsible for taking appropriate consideration of their comfort, health, and humane treatment.

(c) Psychologists ensure that all individuals under their supervision who see using animals have received instruction in research methods and in the care, maintenance, and handling of the species being used, to the extent appropriate to their role. (See also Standard 2.05, Delegation of Work to Others.)

(d) Psychologists make reasonable efforts to minimize the discomfort, infection, illness, and pain of animal subjects.

(e) Psychologists use a procedure subjecting animals to pain, stress or privation only when an alternative procedure is unavailable and the goal is justified by its prospective scientific, educational, or applied value.

(i) Psychologists perform surgical procedures under appropriate anesthetics and follow techniques to avoid infection and minimize pain during and after surgery.

(g) When it is appropriate that an animal's life be terminated, psychologists proceed rapidly, with an effort to minimize pain and in accordance with accepted procedures.

**8.10 Reporting Research Results**

(a) Psychologists do not fabricate data. (See also Standard 5.01 a, Avoidance of False or Descriptive statements.)
(b) If psychologists discover significant canons in their published data, they take reasonable steps to correct such errors in the correction, refraction, erratum, or other appropriate publication means.

8.11 Plagiarism

Psychologists do not present pensions of another's work or data as their own, the other work or data source it cited occasionally.

8.12 Publication Credit

(a) Psychologists take responsibility and credit, including authorship credit, only for work they have actually performed or to which they base substantially contributed. (See also Standard 8.12b, Publication Credit.)

(b) Principal authorship and other publication credit accurately reflect the relating scientific or professional contributions of the individuals involved, regardless of their relative status. Mere possession of an institutional position, such as department chair, does not justify authorship credit. Minor contributions to the research or to the writing for publics-lions are acknowledged appropriately, such an in footnotes or in an introductory statement.

(c) Except under exceptional circumstances, a student is listed as principal author on any multiple-authored article that is substantially based on the doctoral dissertations, Faculty advisors discuss publication credit with students as early as feasible and throughout the research and publication process as appropriate. (See also Standard 8.12b, Publication Credit.)

8.13 Duplicate Publication of Date

Psychologists do not publish us original data, data that have been previously published. This does not preclude republishing data when they are accompanied by proper acknowledgment.

8.14 Sharing Research Date for Verification

(a) After research results are published, psychologists do not withhold the data on which their conclusions are based from other competent professionals who seek to verify the substantive claims through reanalysis and who intend to use such data only for that purpose, provided that
the confidentiality of the participants can be protected and unless legal rights concerning proprietary data preclude their release. This does not preclude psychologists from requiring that such individuals or groups be responsible for costs associated with the provision of such information.

(b) Psychologists who request data from other psychologists to verify the substantive claims through reanalysis may use shared data only for the declared purpose. Requesting psychologists’ obtain prior written agreement for all other uses of the data.

8.15 Reviewers

Psychologists who review material submitted for presentation, publication, grant, or research proposal review respect the confidential.
